

Wanhao D7 Correction on 20th Feb 2017
D7 V1.1 to be released on 1st March 2017

D7 Version 1 issue		D7 Version 1.1 improvement	
Pic	issue	Pic	Improvement
	<p>1</p> <p>There's no protection between the hood and the printer. So it leaves scratches on the printer during shipping</p>		<p>1</p> <p>By adding the RUBBER protector and 2 foam binding to secure the hood from moving during shipping. So there's no scratches anymore.</p>
	<p>2</p> <p>There's no end stop cover for Z axis MAX, So the platform could move out of Z axis from top.</p>		<p>2</p> <p>1. Set the software maximal 200mm for Z axis. 2. By adding top stop cover to stop the platform from moving out of track.</p>
	<p>3</p> <p>The Power Cord is set on top of hood which may punch a mark on hood.</p>		<p>3</p> <p>To put the cord inside the hood to avoid the punch possibility</p>
	<p>4</p> <p>The FEP being pushed broken during shipping.</p>		<p>4</p> <p>To add 2pcs 3mm Foam between the VAT and the Printer Body. So most impact would be absorbed by the foam.</p>

5

Building plate is 5mm inward which may cause the object outside of printing area.

5

We move the location hole outward 5mm. So the Screen is exactly locate below the building plate

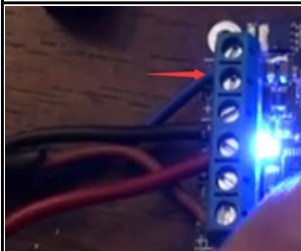

6

The LCD screen get space from top glass after printing dozens hours.

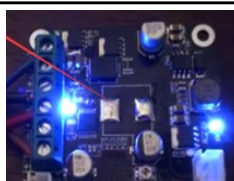

6

To use sticker from back side of LCD to combine the LCD and Glass together

7

There is Beep sound from the motherboard.

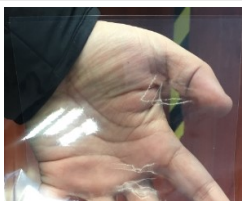

7

To delete the outer voltage amplifier , and use more stable amplifier on the motherboard directly.

8

0.1mm FEP film is too thin to be break

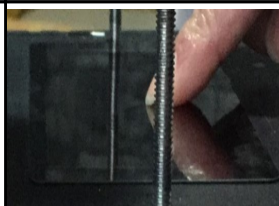

8

To use 0.2mm FEP film to extend using life.

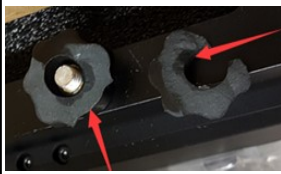

9

The glass is not secured on the printer which could cause the LCD breaking

9

To glue the glass on the surface of printer to avoid any movement during shipping

10

Plastic nut broken during shipping

10

To use Steel nut for shipping. Plastic nut for daily usage.
